Education

University of California, Riverside

B.S. in Computer Science (GPA: 3.80)

Riverside, CA

September 2023 – June 2027

Experience

Suncreer Inc.

June 2026 – August 2026

Software Engineer Intern

Tokyo, Japan

- Developed a **Next.js/TypeScript** dashboard with an interactive document viewer, enabling users to audit and inline-edit **OCR**-extracted values in real time
- Built **Next.js** API routes to orchestrate a **serverless Python** backend, integrating **Claude API** for automated document analysis
- Architected a hybrid **Vercel** deployment using custom edge routing and vercel.json configurations to execute native **Python** serverless functions

Handshake

May 2026 – Present

Software Engineer AI Fellow

Remote

- Evaluated **AI coding agents** by running controlled tasks across blinded model trajectories in **Docker**-based environments
- Analyzed outputs for correctness, reasoning quality, agent behavior, and communication, producing structured comparative evaluations
- Authored **10+ detailed** independent rationales and grading reports using **OpenCode** to generate high-signal feedback for model improvement

Association for Computing Machinery

March 2025 – June 2026

Software Engineer Lead, Project Lead

Riverside, CA

CSA 🤝 🎧 PTISO 🤝 🎧 AISC 🤝 🎧 Mock Trial 🤝 🎧 Redefined 🤝 🎧 Citrus Hack 🤝 🎧

- Led and taught **4 teams of 10+ developers** in web development using **React**, **TypeScript**, **Next.js**, Tailwind CSS, and SCRUM methodologies while implementing **CI/CD pipelines** using GitHub Actions
- Directed **4 Figma** design projects, collaborating with on-campus organizations of **2,000+ members**
- Built and led the Citrus Hack website, UC Riverside's premier hackathon platform for **300+ participants**, integrating a **Docker** and **PostgreSQL** backend for database uptime and data integrity during high-traffic periods

Projects

CookCraft 🤝 🎧

- Developed a full-stack AI-driven recipe generator using the **Gemini API** to suggest personalized meals based on user inventory, dietary needs, and allergy constraints
- Connected frontend to **REST APIs** and **Supabase** to manage user accounts, saved recipes, and meal logs
- Constructed a modern, accessible UI using **Tailwind CSS**, maintaining code quality via ESLint, Prettier, and **GitHub Actions** CI pipelines

Mahoroba Japanese Bakery Website 🎧

- Developed an operational management and **e-commerce** platform for a local bakery, featuring a secure **Stripe API** integration to process payments and handle business logic for tax, tips, and processing fees
- Engineered a custom checkout workflow utilizing **NextAuth** with **Google OAuth** to manage customer profiles and track order histories, improving order retrieval efficiency
- Designed and deployed a **relational database** schema using **Prisma** and **PostgreSQL** to handle real-time inventory tracking, dynamic product catalogs, and transactional data

Technical Skills

Languages: Python, TypeScript, C++, CSS

Frameworks & APIs: Next.js, React, Prisma, React Query, Stripe API, Gemini API, Claude API, NextAuth, Tailwind CSS, PostgreSQL, Supabase

Developer Tools: Docker, OpenCode, Vercel, Git, GitHub Actions, Figma, VS Code, ESLint, Prettier

Project Management: Scrum, Agile, Kanban, Slack
